

# Neuroelectrics® Quality Policy Statement

Neuroelectrics is developing a novel class of neurocircuit therapeutics to treat neurological and psychiatric symptoms to restore neural networks, as patients with brain disorders often have symptoms that don't respond to current therapies. Those symptoms result from dysfunctional neural circuits.

Our technology provides innovative non-invasive and high definition electrical brain stimulation technology for personalized neuromodulation and EEG systems to monitor the electrical activity of the brain. By measuring and modifying brain function, we aim to restore brain health, minimize disabilities and create a better life for patients.

At Neuroelectrics quality is fundamental to our mission of impacting global health by delivering high-quality personalized products that meet our patients needs and comply with applicable regulatory requirements. To that end we maintain and improve the effectiveness of our quality management system which is fundamental to Neuroelectrics' day to day activities. Neuroelectrics' top management guarantees the company's commitment to comply with all applicable regulatory requirements as well as the maintenance of an effective and robust quality management system. Quality objectives are determined on an annual basis to monitor its effectiveness and continuous improvement as a central instrument of the organization's intent of offering best in class non-invasive, personalized brain therapy.

Neuroelectrics' top management is committed to promote within the company the values of this quality policy, through effective communication, continuous training and providing adequate resources.
